

Application profile

“Ambulance”
Vehicle

CARDIFF, UK

The Welsh Ambulance Service purchased a DC heat and power system with a primary use of charging the batteries, to operate emergency equipment including the vehicles life support machine.

The **WhisperGen™** heat and power system was selected for this application due to its quiet noise level, and small inconspicuous size. It has been conveniently installed in the rear corner of the vehicle and thus does not effect the positioning of the crews emergency equipment.
